# SAFETY INSTRUCTIONS

AVIS: RISQUE DE CHOC ELECTRIQUE-NE PAS OUVRIR.

THE LIGHTNING FLASH WITH ARROWHEAD SYMBOL WITHIN AN EQUILATERAL TRIANGLE IS INTENDED TO ALERT THE USER TO THE PRESENCE OF UNINSULATED DANGEROUS VOLTAGE WITHIN THE PRODUCT'S ENCLOSURE THAT MAY BE OF SUFFICIENT MAGNITUDE TO CONSTITUTE A RISK OF ELECTRIC SHOCK TO PERSONS.

THE EXCLAMATION POINT WITHIN AN EQUILATERAL TRIANGLE IS INTENDED TO ALERT THE USER TO THE PRESENCE OF IMPORTANT OPERATING AND MAINTENANCE(SERVICING) INSTRUCTIONS IN THE LITERATURE ACCOMPANYING THE PRODUCT.

APPARATUS SHALL NOT BE EXPOSED TO DRIPPING OR SPLASHING AND THAT NO OBJECTS FILLED WITH LIQUIDS, SUCH AS VASES, SHALL BE PLACED ON THE APPARATUS.

1. Read these instructions.
2. Keep these instructions.
3. Heed all warnings.
4. Follow all instructions.
5. Do not use this apparatus near water.
6. Clean only with dry cloth.
7. Do not block any ventilation openings. Install in accordance with the manufacturer's instructions.
8. Do not install near the heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
9. Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety, if the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
10. Protect the power cord from being walked on or pinched particularly at plugs convenience receptacles, and the point where they exit from the apparatus.
11. Only use attachments/accessories specified by the manufacturer.
12. Use only with the cart, stand, tripod, bracket, or table specified by the manufacturer, or sold with the apparatus. When a cart is used, use caution when moving the cart/apparatus combination to avoid injury from tip-over (Figure 1).
13. Unplug this apparatus during lightning storms or when unused for a long periods of time.
14. Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.

Figure 1

**WARNING:** To reduce the risk of fire or electric shock, do not expose this apparatus to rain or moisture.

**CAUTION:** Apparatus shall not be exposed to dripping or splashing and no objects filled with liquids, such as vases, shall be placed on the apparatus.

**CAUTION:** Apparatus shall not be exposed to dripping or splashing and no objects filled with liquids, such as vases, shall be placed on the apparatus.

## MAIN FEATURES

### SIMMONS SOUND LIBRARY

The SD2000 features a new sound library developed by Simmons to represent the most sought after acoustic drums, world percussion instruments, and classic Simmons electronic drums—as well as an inspiring collection of unique new sounds not found in other electronic drum kits.

### USER SAMPLE MEMORY

You can also load your own sounds (.wav files) for maximum flexibility and creativity. 28MB of the waveform memory is reserved for this.

### VARIABLE ATTACK RESPONSE

Sounds created for the SD2000 were designed to give the player a realistic sonic response that is appropriately different each time you strike a drum or cymbal on the kit.

### SYNTHESIS PER SOUND

12dB / octave low pass filter with variable cutoff and resonance, +/- octave pitch shifts, independent velocity control of filter cutoff, resonance pitch shift, and envelope length. Up to 23 programmable sounds per kit (19 in the standard kit, 23 in the optional expanded kit).

### TENSIONABLE MESH DRUM HEADS

The new mesh drum design allows the user to customize the surface tension of the drumhead to fit your own playing preferences, and give a more realistic and responsive surface.

### ISOBALL MOUNTS

The new mounting design for the drum pads, cymbal pads, and sound module isolates each element from transmitting or receiving vibrations to the others. This reduced crosstalk avoids unintended triggering or interference.

### AUDIO OUTPUTS AND INPUTS

Stereo headphone and line outputs allow you to hear the Simmons kit via your headphones, powered speakers, mixer or other audio setup. The Aux Input allows you to connect your phone, MP3 or other audio source, so its audio can be heard along with the module sounds at the module's audio outputs.

### EXPANDABLE

The SD2000 is expandable to a 10 piece kit—snare, kick, 4 toms, hi-hat, ride cymbal, and 2 crash cymbals—with the Simmons SD2000 expansion pack.

# SD2000 SPECIFICATIONS

## MODULE SPECS

Polyphony 64 Voices

50 Preset Kits

Up to 50 User Kits (containing 19 sounds in 8 drums)

(expanded kit = 23 sounds in 10 drums)

128 User Sounds, 776 Preset Sounds

28Mb of User Sample Memory (for .WAV files)

4 Demo Songs

Unlimited User Songs (The amount of sounds depend on the storage media.)

Mixer: Kick, Snare, Toms, Crash 1, Crash 2, Ride, Hi-Hat,

Tom 4 and 2 Cymbal Inputs

Effects: Room, Stage, Hall and Plate Reverbs, Delay and Echo

2-Band EQ per Kit

## TRIGGER INPUTS

Kick

Snare - Triple zone

Toms 1-3 - Dual zone

Crash - Dual zone

Hi Hat - Single zone with multi-positional controller

Tom 4 and Cymbal 2 inputs

## MIDI JACKS - IN AND OUT

USB to Computer- For sample transfer and MIDI USB

USB Host - For storing/recalling user data to/from your USB device as well as Playback and Recording of audio files

## RACK

Anodized Aluminum

Diecast Mounts with Isoball rubber

## DRUMS

11" Mesh Triple Zone Snare

9" Mesh Dual Zone Toms

12" Hi Hat Cymbal

13" Dual Zone Crash Cymbal

15" Triple Zone Ride Cymbal

9" Kick Drum and Stand

Multi-position Hi Hat Controller

## EXTERNAL CONNECTIONS

Headphone Output

Master Stereo Outputs (1/4" TS Unbalanced)

1/8" TRS Aux Input

MIDI IN and Out Jacks

USB Connection

## SEQUENCER

Preset Songs - 4 demo songs

BPM

Click/Metronome - Click Voice, Time Signature,

Tempo, Interval, Volume

## WELCOME

Congratulations on your purchase of Simmons' SD2000 Electronic Drum Kit. To get the most enjoyment from this kit, we recommend that you skim through this manual at least once, and then refer back to it to learn more about specific functions.

## CARING FOR YOUR SD2000 ELECTRONIC DRUM SET

### LOCATION

Keep the drum kit away from direct sunlight, high temperature sources, and excessive humidity to prevent deformation, discoloration, or more serious damage.

### POWER SUPPLY

- Turn the power switch OFF when the SD2000 is not in use.
- The AC adapter should be unplugged from the AC outlet if the SD2000 is not to be used for an extended period of time.
- Avoid plugging the AC adapter into an AC outlet that is also powering high-consumption appliances such as electric heaters or televisions. Also avoid using multi-plug adapters, since these can reduce sound quality, cause operation errors, and result in possible damage.
- To avoid damaging the unit, turn the SD2000 and all related devices OFF prior to connecting or disconnecting cables. Powering down the SD2000 other than by pressing the 'power' button risks losing user program data.

### HANDLING AND TRANSPORT

- Never apply excessive force to controls, connectors, and other parts.
- Unplug cables by gripping the plug firmly. Do not pull on the cable.
- Disconnect all cables before moving the module.
- Physical shocks caused by dropping, bumping, or placing heavy objects on the module can result in scratches and more serious damage.

### CLEANING

- Clean the module with a dry, soft cloth.
- A slightly damp cloth may be used to remove stubborn grime and dirt.
- Never use cleaners such as alcohol or thinner.
- To avoid discoloration, do not place vinyl objects on top of module.

### ELECTRICAL INTERFERENCE

The module contains digital circuitry and may cause interference if placed too close to radio or television receivers. If this occurs, move the SD2000 further away from the affected equipment.

### SERVICE AND MODIFICATION

- There are no user serviceable parts in the drum module.
- Do not attempt to open the sound module or make any change in the circuits or parts of the unit. This would void the warranty.

# ASSEMBLING YOUR KIT

## CAUTION!

While Simmons makes every effort to provide the highest quality products, metal shavings and/or burrs occasionally remain as a by-product of the manufacturing process. To avoid injury, please use caution when adjusting clamps, or when working with pipe and screw ends.

## PARTS / ASSEMBLY

### WHAT'S INSIDE EACH BOX

Before assembly, please check that all items listed below are present.

### BOX 1

#### Cymbals

Triple Zone 15" Cymbal- SD2000RD

Dual Zone 13" Cymbal- SD2000CR

Single Zone 12" Cymbal- SD2000HH

Triple Zone  
15" Cymbal

Dual Zone  
13" Cymbal

Single Zone  
12" Cymbal

11" Triple  
Zone Snare

9" Dual  
Zone Tom

#### Drums

11" Triple Zone Snare- SN2000SN11

9" Dual Zone Tom- 3- SD2000TOM9

Kick Drum and Stand- SD2000BD

Hi Hat Controller- SD2000HHC

SD2000 Module

#### Accessories

AC Adapter

Multi-pin Cable Harness

Cymbal Boom Arm/Stand

Drum Sticks

Stand Legs

Straight Bass Drum Mounting Bar (Factory Mounted)

Reversible Recessed Bass Drum Mounting Bar

Hi Hat  
Controller

Kick Drum  
and Stand

SD2000  
Module

AC Adaptor

Multi-pin Cable Harness

1 Pair  
Drumsticks

Straight and Reversible Recessed  
Bass Drum Mounting Bars

### BOX 2

Drum Rack

Left Rear Post

(NOTE: this is the post with NO cymbal mount on top)

Right Rear Post

(cymbal mount on top)

Right Front Post

(cymbal mount on top)

Left Front Post

(cymbal mount on top)

Center crossbar with two drum mounts

Left Side crossbar with module and hi hat mount

Right side crossbar with one drum mount

## ASSEMBLING YOUR KIT

### RACK ASSEMBLY

1. Remove all preassembled rack tubing with clamps from Box 2.
2. Each T-Fitting and tube end-fitting is labeled with a number.  
Lay the vertical and horizontal tubes on the floor with the sticker numbers matching each section.
3. Remove Drum Key from the crossbar.
4. There is a Drum Key Fastener location on the end of each fitting.  
Back this fastener out until the pointed end is no longer protruding inside, but do not remove it. Do this for all the fittings with this feature on the vertical leg-fittings.
5. Begin with T-fitting/tube end number (1) and insert into the corresponding left vertical leg. The surfaces of the fitting should almost touch. Tighten the Drum Key Fastener with the Drum Key until snug (do not over tighten).
6. Continue assembling the rack working your way around to T-fitting/ tube end number (1) (to the vertical right leg).
7. After you have the rack assembled, double check each Drum Key Fastener and make sure they are all snug (but do not over tighten).

## ASSEMBLING YOUR KIT

### ATTACHING THE DRUMS TO THE RACK

Each drum has a hand knob thumbscrew that comes with it. Place the hand knob thumbscrew into the hole at the bottom of the shell and screw it in partially.

Slide the drum onto the mount arm stem and tighten the hand knob thumbscrew until the drum is securely held on the mount.

Adjust the angle of the drum to where you want it, and use the hand knob thumbscrew on the top of the mount to tighten the Isoball and to secure the drum.

### ATTACHING THE CYMBALS (CRASH, RIDE, HI-HAT)

Attach cymbal arms to rack and adjust to the desired position and angle before attaching the cymbals. Hand tighten the knobs for height and angle adjustments.

The cymbals mount to the top of the arms into the ISO Ball.

Pull down on the lock release on the cymbal arm.

Press the cymbal onto the end of the arm while holding down on the lock release. Press on until the ISO Ball touches the shoulder of the mount.

To remove hold down the lock release and pull cymbal off.

**Watch the video 'Cymbal Attachment' to learn how to attach a cymbal at [simmonsdrums.net/videos](http://simmonsdrums.net/videos).**

# ASSEMBLING YOUR KIT

## ATTACHING THE MODULE

Attach module mount arm to the rack and adjust to the desired height in a vertical position (angle can be adjusted later) before attaching the module. Hand tighten the knobs for height and angle adjustment. The module mounts to the top of the arms into the ISO Ball. Pull down on the lock release on the module mount arm. Press the module onto the end of the arm while holding down on the lock release. Press on until the ISO Ball touches the shoulder of the mount.

To remove hold down the lock release and pull module off.

## KICK DRUM AND STAND

Screw the legs into the base being careful not to cross thread. Hand tighten until very tight.

Loosen fastener on drum head with a drum key. Slide drum onto mounting arm and tighten drum key (but do not over tighten).

**Please Note:** To eliminate confusion with the tom pads, the drum pad assigned to the bass drum has the Simmons logo (printed on the drum head) on the opposite side to the mounting arm.

The mounting shelf for the pedal is adjustable. Loosen both side knobs but do not remove. Place on a flat surface. The rubber feet are adjustable, turn as needed to level the base and provide stability. Attach your pedal securely to the mount shelf. Once the pedal and base are level tighten both side hand knobs.

## ADAPTABLE BASS DRUM MOUNT

There are two mounting bars included with the kit. One is straight and the other is recessed that can be reversed. The recessed shelf is reversible.

Back Recessed Mounting Bar

Front Recessed Mounting Bar

Straight Mounting Bar

**Watch the video 'Kick Pedal Attachment' to learn how to fit a kick pedal at [simmonsdrums.net/videos](http://simmonsdrums.net/videos).**

**Spikes:** The rubber feet are removable; just pull them off to use the spike option. The spikes are adjustable in length, rotate to adjust as needed.

**Note:** A kick drum beater pedal is not included with the kit. We strongly recommend using plastic beaters or a bass drum head patch to avoid damage to the kick drum mesh head.

Rubber Foot

Extended Rubber Foot

## KICK DRUM, HI-HAT PEDAL AND PAD CONNECTIONS

1. Place the kick drum pad tower on the floor in the center of the rack as illustrated.
2. Attach your kick drum pedal to the kick drum pad tower (pedal not included) see above.
3. Place the hi-hat pedal on the floor and to the left.
4. Connect the marked cables from the pads to the multi-pin input on the bottom of the sound module. It is best to start from the opposite side of the module and route the cables with the cable clips as you go. This will provide the cleanest look and make it much easier.

Spike Foot

Extended Spike Foot

# FINAL ASSEMBLED KIT

# DRUM MODULE OPERATION

## TOP PANEL CONTROLS

1. Volume: Controls the main volume output.
2. Aux In: Controls the volume of the aux input (for instance, if you connect the audio output of your phone or MP3 player to the aux input, this control will let you adjust the volume of that audio relative to the volume of the kit).
3. Value Dial: Changes the current value on screen.
4. Increment/Decrement buttons: Changes the currently selected value on screen incrementally.
5. Function buttons: Press a button to select the function that is on screen above it.
6. Kit: Selects the Kit Mode.
7. Song: Selects the Song mode.
8. USB: When a USB device (such as a thumbdrive) is connected, this button selects USB host operations.
9. Utility: Selects the Utility Mode functions.
10. Power: Press to turn power on. Hold several seconds to turn power off. Always use the power button to switch off the SD2000. Pulling the plug or powering down in any other way can erase your program data. For extra security, always backup your kits and sounds to a USB stick.
11. Save/Enter: Used for saving or entering a value that is selected on the screen.
12. Cursor ← and →: Moves the onscreen cursor forward or backwards.
13. Exit: Used to exit a mode or specific screen.
14. Part Mute: Mutes a part in a song sequence. Normally defaults to the drum part.
15. Tempo – and +: Changes the sequencer tempo values incrementally.
16. Play/Stop: Starts and stops the sequencer in the song mode.
17. Click: Turns on and off the sequencer click.
18. Rec (Record): Records MIDI or audio.

# DRUM MODULE OPERATION

## FRONT MIXER PANEL

19. Headphones: Controls the headphone volume separately from the main output.
20. Faders: These control 3 banks of real-time adjustments to the current kit sound.
- These are all global real time controls, for making on-the-fly adjustments to the overall sound of the module. They do not change the stored programming of the current kit. Instead, they "non-destructively" reshape the sound of any kit you choose, acting as temporary real-time modifications to the stored settings.
  - For example if you are playing on stage and find the kick drum is too loud you can press the Bank button to select the 3rd bank of fader functions (blue LED beside Kick will be lit), and move the far left fader (labeled Kick) to set your preferred volume for the kick.
  - Once you've made any adjustments, they will stay active and be applied to any kit you select to play.
  - To clear all current fader-controlled adjustments hold the (21) Bank button 3 seconds. All 3 banks of fader controls will be "cleared" and all kits will then play with their unadjusted programmed settings.
21. Bank: Press to select which bank of features the faders will control: lit LED indicates which bank is being controlled by faders.
22. Headphone/Drum Stick Rest

- Bank 1: Tuning, Filter, Shape, EQ - HI, EQ - Low
- Tuning will globally lower/raise the pitch of the kit.
  - Filter will apply a Low pass filter to the kit sound.
  - Shape allows a choice of Tight, Normal or Loose.
  - EQ - HI will boost or reduce high frequencies.
  - Low will boost or reduce low frequencies.
- Bank 2: Ride, Tom 4, Crash 2, Accompaniment
- Adjust the output volumes of each of these Kit and Song elements.
- Bank 3: Kick, Snare, Toms, Hi Hat and Crash
- Adjust the output volumes of each of these Kit elements.

# DRUM MODULE OPERATION

## BACK PANEL

- 22. AC Adapter input- 9V
- 23. USB to Host: USB connection for Computer and iOS devices.  
Use this connection when updating your SD2000 firmware from *simmonsdrums.net* via USB from a computer.
- 24. Aux input: 1/8" TRS input for auxiliary audio devices (you can connect you phone or mp3 player here)
- 25. Main Outputs: L/Mono and R
  - If connecting to a mono system, use the L/Mono jack only.
  - Stereo output requires two cables, one from L/Mono, and one from R.

## SIDE PANEL

- 26. USB: Connect a USB thumb drive here if you'd like to backup/restore your user Kits, Drums and Sound, or play .wav or mp3 files from your USB device.
- 27. Tom 4: This TRS jack can be used for a dual zone drum or cymbal.
- 28. Crash 2: This TRS jack can be used for a dual zone drum or cymbal.
- 29. MIDI Output: Connect to the MIDI In jack of a device that you'd like to send MIDI to.
- 30. MIDI Input: Connect to the MIDI out jack of a device that you'd like to receive MIDI from.
- 31. 1/8" Headphone Output

## BOTTOM PANEL

Serial Connection Jack for the pad trigger cables.

## MULTI-PIN JACK INPUT

Using the provided cables, connect the 1/4" jacks to the corresponding drum pads, cymbal pads and kick pad. The pin connection will attach to the serial port of the sound module. (See illustration.)

**NOTE:** The sound of the hi-hat pad is controlled by the hi-hat pedal. Similar to a real drum kit, the hi-hat pad functions as an 'open hi-hat' when the pedal is released. When the pedal is pressed down, it functions as a 'closed hi-hat'.

## BASIC OPERATIONS AND NAVIGATION

The SD2000 works primarily in the Kit, Song and Utility modes. In Kit Mode, you select the drum kit you want to play, and edit the kits and sounds within it.

### SELECTING MODES

To select a Mode press the Kit, Song or Utility buttons on the left side of the module.

### SELECTING KITS

To select Kits make sure you are in the Kit mode by pressing the Kit button. The LCD screen should display a drum kit.

You can now select a kit by turning the large dial in the middle of the module, or you can step through the kits using the dial -/+ buttons that flank that dial.

### ADJUSTING KIT SETTINGS

To change the kit settings shown immediately below the kit name, press the Cursor → button and you'll select the Kit Volume, which you can now adjust via the large dial and flanking -/+ buttons. Further presses of Cursor → or ← buttons will select the other settings, or again select the Kit Name for dial and -/+ control.

### JUMPING BACK TO KIT SELECTION

You can quickly jump back to kit selection by pressing the Kit button anytime, then turn the dial or use the flanking -/+ buttons.

### FUNCTION BUTTONS

The Function buttons below the screen allow you to go to other screens for further editing, or execute other functions related to the current screen and mode.

## ADVANCED OPERATIONS

### EDITING A DRUM KIT

All settings in Preset and User Kits can be edited. Edits made to user kits are always retained, edits to Preset Kits depend on the setting of "Preset Memory Protect" setting in the Utility menu. When on, any edits to Preset Kits will be lost when you switch off the power. When "Preset Memory Protect" is off, your edits are always saved.

### KIT REVERB AND EQ SETTINGS

Each kit has its own Reverb and EQ settings. The main settings for the EQ and Reverb are on the Main screen of Kit mode, shown when you press the Kit button.

To change the settings use the cursor buttons to move to the setting you want to change, then use the large dial or the - /+ buttons to make your adjustment.

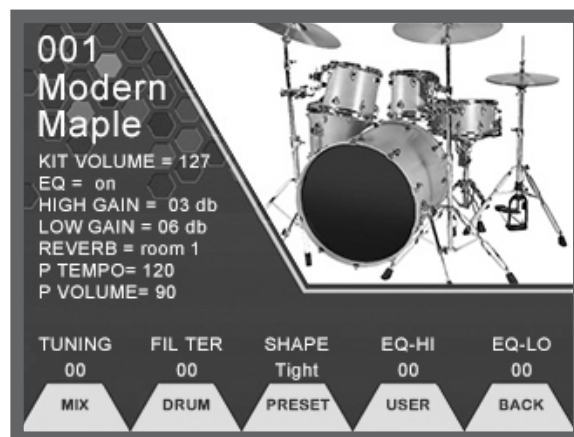

### P TEMPO AND LEVEL

This sets the tempo and level settings for any Pattern Play patterns assigned to the kit.

### CHANGING KIT MIX SETTINGS

Each kit has its own Mix settings. On the main Kit screen (shown when you press the Kit button), the F1 function button is labeled MIX. Press F1 to see the current volume settings, and get access to pan, effects and pattern settings as well.

**Firmware Update Notice:** Occasionally Simmons will make updates to the operating system (Firmware). Be sure to check [simmonsdrums.net](http://simmonsdrums.net) for the latest operating system.

**Please Note:** When viewing and changing mix settings, the kit will be slow to trigger sounds as you hit drums and cymbals. You can quickly restore normal responsiveness by pressing F5, labeled BACK, to return to the main Kit screen.

## ADVANCED OPERATIONS

### MIX SCREEN VOLUME GRAPHIC DRUM VOLUMES

Pressing Kit then pressing F1 (MIX) can access this screen. It shows an overview of the SD2000 kit with the current volume settings for each drum and cymbal. When 'Follow Trigger' is enabled, hitting a drum, rim or cymbal will select it for volume adjustment using the large dial or flanking +/- buttons. You can also use the cursor ← → buttons to select the onscreen drum or cymbal you want to adjust the volume for. To disable the 'Follow Trigger' function, press 'utility' then 'trigger (F1)' then switch 'Follow Trigger' off.

### PAN SETTINGS

The screen can be accessed by pressing Kit, then F1 (MIX), then F2 (PAN). Just like volume editing above, if 'Follow Trigger' is enabled, then hitting a drum or cymbal selects it, or you can use Cursor ← → . Then the large dial and flanking +/- buttons to adjust the left-to-right placement of the sound of that drum or cymbal.

- "C" indicates the sound is centered
- "L" indicates the sound is left of center, with the range of L01 (just left of center) to L64 (far left).  
"R" indicates the sound is right of center, with the range of R01 (just right of center) to R63 (far right).

### KIT INSTRUMENT EFFECTS SEND SETTINGS

The screen above can be accessed by pressing Kit, then F1 (MIX), then F3 (EFFECTS). Just like volume and pan editing, if 'Follow Trigger' is enabled, then hitting a drum or cymbal selects it, or you can use Cursor ← → . Then the large dial and flanking +/- buttons to adjust the amount of effect to be applied to that drum or cymbal. To disable the 'Follow Trigger' function, press 'utility' then 'trigger (F1)' then switch 'Follow Trigger' off.

**Please Note:** All screens on the SD2000 depict the standard set up for a 10 piece kit (snare, kick, 4 toms, hi-hat, ride cymbal, 2 crash cymbals). Your configuration may vary from these images.

## ADVANCED OPERATIONS

### PATTERN PLAY

The screen can be accessed by pressing Kit, then F1 (MIX), then F4 (PATTERNS). The Pattern play mode allows you to assign a MIDI percussion pattern to a drum or cymbal, so that each time you hit that drum or cymbal, the pattern will play. The Patterns will loop until you strike the drum or cymbal again. For a demonstration of how to use the SD2000 patterns, go to [simmonsdrums.net/videos](http://simmonsdrums.net/videos).

There are several preset MIDI percussion patterns that you can select from at the top of the screen. If you record your own MIDI patterns these can be played as well.

The following settings are available:

- Pattern = Shown at the top of the screen, this selects the pattern to be played.
- Pad = You can select any pad to trigger the Pattern (Kick, Snare, etc)
- Pattern SW = Set this to on to enable pattern play for this pad, or off to disable pattern play for this pad.
- Retrigger= Set this to Retrigger to have the pattern start from the beginning and play a single time each time you hit the pad. Set it to Start/Stop to have subsequent pad hits start and stop the pattern, with the pattern playing in a continuous loop until stopped by a pad hit.
- Velocity= On or off. Determines if the pattern to be played back will respond to your striking velocity on the drum or cymbal (On), or play back at a fixed volume every time (Off).
- Drum Sound = Set this to Off if you only want to hear the pattern when you hit the pad, and don't want to hear the sound the pad would normally play. Set it to On to hear the pad each time it is hit, along with hearing the pattern.

### CHANGING A DRUM SOUND IN A KIT

Press Kit, then F2 (Drum). You can select the sound incrementally with the dial or the +/- buttons. You will see the numbers indexed along with the names on the Preset List.

Move the cursor to the Category area to quickly view by Category such as "snarens." For a full list of the sounds and the sound categories please see the appendix.

The Function button for User Wave is intended for assigning your own imported samples into Instrument programs that can be assigned in Kits. See the section for instructions on how to import your own samples and assign them in the SD2000.

There are also Function buttons that select between preset or user sounds in the SD2000 so you can locate the sounds quickly.

### CHANGING DRUM PARAMETERS

On the Main Drum screen you adjust some basic settings that affect the sound such as Pitch, which affects the coarse pitch; Pitch Fine Tune, which changes pitch in smaller steps; Velocity To Pitch, which changes the pitch to either positive or negative depending on the value set. This will not be affected if the Pitch or Pitch Fine Tune is used. To edit more functions such as the Filter and Envelope (shape) of a sound press the Function button below the Filter/Env button. See the 'Creative Use of the SD2000' videos at [simmonsdrums.net/videos](http://simmonsdrums.net/videos) for examples and tips on how to use the 'velocity to pitch' feature.

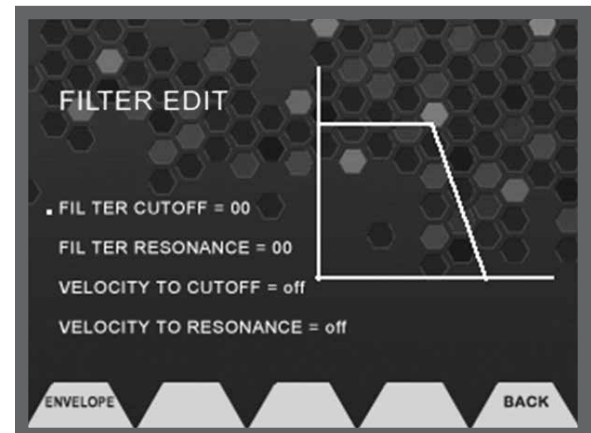

## ADVANCED OPERATIONS

### FILTER EDIT

The filter screen will show a graphic representation of the current Filter settings: Cutoff, Resonance, Velocity to Cutoff and Velocity to Resonance. You can see a real time graphic that indicates the filter for reference.

- Filter Cutoff: This adjusts a low pass filter's cutoff frequency.
- Filter Resonance: This adjusts the resonance of the filter.
- Velocity To Cutoff: Sets the filter cutoff to respond to the dynamic velocity of your playing
- Velocity to Resonance: Sets the filter resonance to respond to the dynamic velocity of your playing

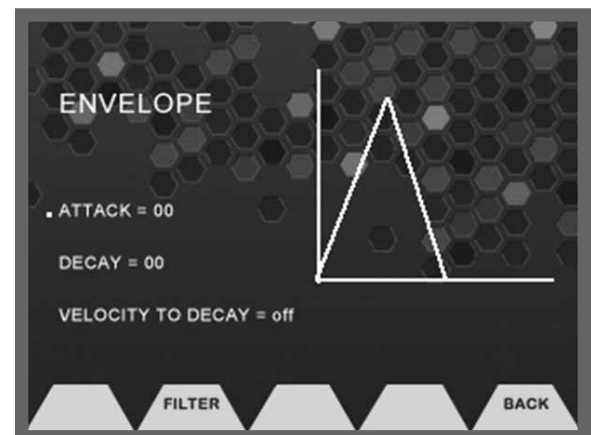

See the 'Creative Use of the SD2000' videos at [simmonsdrums.net/videos](http://simmonsdrums.net/videos) for examples and tips on how to use the 'velocity to cutoff' and resonance features.

### ENVELOPE EDIT

From the Filter Page you can enter the Envelope settings by pressing the Function button Env. The Envelope screen has a graphic representation of the current envelope of the sound. The Envelope settings are: Attack, Decay and Velocity to Decay. As you change the parameters you can see the graphic change indicate the change to the envelope.

See the 'Creative Use of the SD2000' videos at [simmonsdrums.net/videos](http://simmonsdrums.net/videos) for examples and tips on how to use the 'velocity to decay' feature.

## ADVANCED OPERATIONS

### WHAT IS A DRUM?

In the context of the SD2000, a 'drum' is made up of a number of sounds. For example, the ride cymbal has three sounds, one for each for the bell, bow and edge areas of the cymbal. A tom has two sounds, one when you hit the head and another when you hit the rim. The hi-hat has four sounds: open, sizzle, closed and foot (or pedal). It's important to understand that these sounds are save separately. So for the ride cymbal, if you change all three sounds, you will have to save them and three named sounds, e.g., john's bell 2, john's bow 2, john's edge 2. These sounds can then be used in other kits as you see fit.

### WHAT IS A SOUND?

A sound is a number of samples and a set of parameters that control the pitch, filtering, decay, and dynamic variance of those samples. Generally, there are 4 samples, switched by velocity plus 'round robin' samples, which reduces 'machine gunning' effects. (A sound is also sometimes referred to as a 'voice'.)

### SAVING YOUR DRUM SETTINGS

After making your changes you can save them by pressing the Save/Enter button. The screen will show Available User locations.

1. Select the location with the +/- buttons and then press the Save/Enter button.
2. You come to a screen where you can name your sound.
3. Use the Value dial to change the character and move to the next character with the cursor buttons.
4. After you complete changing the characters you then should press the Save/Enter button. You will come back to the drum sound screen with the updated name.

### SAVING PRESET KITS

The Preset Kits can be edited and retained if you turn off the Preset Memory Protect function in the Utility mode (see page 25). These changes will be retained until you reset the module to factory settings.

### SAVING YOUR KIT

1. From the main Kit page press the Save/Enter button.
2. You will see a screen where you can name your kit.
3. Use the Value dial to change the character and move to the next character with the cursor buttons.
4. Press the Save/Enter button.
5. You will come back to the Kit screen showing the User Kit you just saved.
6. You can go to the User kit by pressing the Function button (F3 User) and highlighting the kit you want to overwrite and then press the Save/Enter button to select it. (We recommend that when programming your own kits and sound, you copy one of the preset kits to the user kit area, then rename it. Then you can simply edit the mix, effects, drums, sounds and program settings for all the sounds contained in that kit and they will be automatically stored.)

**Note: When saving Kits, any edits you make to the User drums will be saved along with the Kit. This may overwrite any User drums that are used in the Kit.**

## ADVANCED OPERATIONS

### SD2000 FUNCTIONALITY - HOW TO PLAY THE KIT

The SD2000 can be played immediately after you start it up, however there are some functions to be aware of when you want to take full advantage of its functions

#### SNARE TRIPLE ZONES

The Snare drum has several playable zones or sections where you can strike it to get multiple sounds like a real drum\*. The center of the drum is set up with sounds that were created when striking a real snare drum. The rim section to the left is designated to have the rim shot sound. Similar to when you strike a real snare drum with your stick on the rim and center of the drum. The rim section on the right is setup to be cross stick sound. Similar to when a drummer holds down the stick on the drum head and strikes the rim.

\* **Please Note:** Not all preset Kits have the snare cross stick or tom rims assigned.

#### TOM DUAL ZONES

The tom drums all have dual zones. Meaning you can get a different sound when you strike the center or the rubber rim section. This can be useful for when you want a cowbell sound readily available to play on the kit.

#### CRASH DUAL ZONES WITH CHOKE

The crash cymbal inputs are dual zone as well. This means you can strike the bow of the cymbal pad for one sound and the hit the rim of the cymbal for another sound. You can stop the sounds from playing back when you grab the edge of the cymbals to replicate the effect of choking a cymbal.

#### RIDE TRIPLE ZONES

The ride cymbal has three separate zones, bow (middle of the cymbal) bell (center) and edge.

#### KICK DRUM

The kick drum has only one zone.

#### HI HAT PEDAL

The SD2000's hi hat pedal is multi-positional. Meaning that as you move your pedal with your foot you can change the hi hat cymbal sound to be open, semi-open (sizzle) and closed. You can also strike the heel of the hi hat pedal hard with your foot to emulate the splash sound you get with an acoustic hi hat pedal.

## ADVANCED OPERATIONS

### SONG MODE

The song functionality in the SD2000 is designed as an interactive mode to allow you to play along with audio files for practice or live use accompaniment. You can also record your playing for playback either by MIDI or audio (when recording to a USB device). MIDI recordings can be used in the Pattern play mode for triggering from a strike to a drum or cymbal.

### DEMO SONGS

There are 4 demo songs in the SD2000 to get you started with using the sequencer. These are preset as the first 4 songs in the Song mode. When playing the demo song you can press the Part Mute button on the front panel next to the transport controls to mute the preset drum part and play your own part.

The tempo adjustment will not work on the demo songs.

### SONG MODE FUNCTIONS

To enter Song Mode press the Song button on the front panel. You will see the current song information: Length, Tempo, BPM and Time Signature. You can adjust the following settings; Level, Loop (on/off), Pre-count. The Edit button at the bottom of the screen will take you to the Song Edit settings:

- Accompaniment Volume
- Drum Track Volume
- Kit Link- Link keeps the preset Drum sound that is assigned linked to the demo song
- Click Volume
- Track Mute – Selects which track will be affected by the PART MUTE BUTTON

## ADVANCED OPERATIONS

### PLAYING AND RECORDING YOUR OWN DRUM SONGS

There are two ways you can record and playback your playing on the SD2000 these are MIDI and Audio. The audio mode requires a USB device to record to. The MIDI recorder will record to the internal memory of the SD2000.

### MIDI PLAYBACK AND RECORDING

To enter the MIDI recorder function press the Function button for MIDI Play/Rec. This will take you to the MIDI Player screen. The display will show the current MIDI files on the screen list.

If none are recorded you will start at the top with first position to record "Record 01". Press the Record button. This will take you to the record setup screen.

- Pattern: This selects the pattern position to record to.
- Drum Track Volume: Sets the volume of the track
- Synchronized Start: Starts recording when you start to play.
- Count In: Sets up the count-in bars (0-4 bars)
- Click Volume: Volume setting for the Click track
- Time Signature: Determines the time signature of the Click track

After you make your settings you are ready to record. Press the Rec button on the front panel to start recording.

### TO PLAY A MIDI FILE

On the Song Main screen select the Function button for MIDI Play/Rec. Move the cursor to the file you want to play and press the Play Function button. A pop up window will appear and show the name and a counter indicating the play time. To play the file, press the front panel Play/Stop button. Press it again to stop playing the file.

### EXPORT

This allows you to export the MIDI file from the internal memory of the module to a USB Device. If you don't have a USB device plugged in you will get an error when you press the button.

### AUDIO PLAYBACK AND RECORDING

To play back audio and record you will need to place a USB device into the USB host slot on the back panel of the SD2000.

### PLAYING BACK AUDIO FROM A USB DEVICE

From the Main Song Mode display, press the Function button for Audio Play and Rec.\* You will come to the Audio Player Window. You can select the audio file from the list displayed with the -/+ buttons. Then press the Play Function button. A pop up window will be displayed to indicate that the file is active. Press the front panel Play button to start and stop the audio file.

For more information on playing along to your favorite mp3 tracks, check out the demo videos at [simmonsdrums.net/videos](http://simmonsdrums.net/videos).

\*You can press the front panel USB button as a short cut to get to the audio playback and record mode.

## ADVANCED OPERATIONS

### RECORDING TO A USB DEVICE

1. Press the Record Function Button (F2). A pop up window will appear.
2. Press the front panel Record button to begin recording.
3. Press the Play/Stop button to stop recording.
4. Use the previous steps on how to play audio files to play back your recorded song.

**Please Note:** Recordings will be mono 32-Bit WAV files.

**Please Note:** Recording will begin after 5 sec. You will see the REC button LED light turn red and then will start blinking to indicate recording has started.

### USB TO COMPUTER CONNECTION

The SD2000's USB to computer connection is used for two different operations. MIDI communications and Sample transfers.

#### MIDI

The SD2000 is a USB MIDI class compliant device meaning that you can plug it into your Windows or Apple computer and it will be recognized as a MIDI device. This makes it possible to use the SD2000 as a trigger to MIDI device to play sounds on your computer or you can use the SD2000 module as a drum module from your computer MIDI software.

# ADVANCED OPERATIONS

## SAMPLE TRANSFERS

The SD2000 can import up to 28Mb of 16Bit .wav files. To move .wavs into the SD2000, you will need to use the Simmons software program (available on [Simmonsdrums.net](http://Simmonsdrums.net)) that will enable you to select the sample and send it to the internal memory of the SD2000. After transferring the sample you can assign the sample your own custom programs that can be played on the drums or cymbals.

You will need the SD2000 Sample Transfer program to move the files from your computer to the SD2000. You can download this from [Simmonsdrums.net](http://Simmonsdrums.net). We strongly advise that you back up any User kits and sounds you want to keep before loading User samples.

1. Plug in the SD2000 to your computer via USB.
2. Launch the SD2000 File transfer program. You should see the program indicate that you are connected to the SD2000's flash memory.
3. On the screen of the program Select the .wav files you want to transfer to the module. You can transfer up to 28Mb of 16Bit .wav samples to the memory of the module in total.
4. After selecting the files you will see them listed on the transfer screen.
5. Click on the Transfer button to send the files to the module.
6. After the program completes the transfer, you will need to disconnect the power on the back of the module and restart. Pulling the power cable before powering down normally may erase some User kits and sounds.

Once the files are inside the module you can now assign them to User Wave programs.

## SAMPLE ASSIGNMENT.

1. Select the Drum Function button. To do this, press Kit then F2 (Drum).
2. Press the User Wave Function button.
3. Press the Edit Function button. This will take you to the Sample Assignment screen. Press ← and → to move the cursor left and right to the sample parameter, press button UP/DOWN to move the cursor up and down to the Sample position (1-4).
4. Press the Load Wave Function button and select the sample that you want to assign with the value dial and press the Load Function button. You will come back to the Sample assignment screen with the sample assigned to the sample position that you selected.
5. You can modify the settings for Volume, Pan, Velocity cross switching and Pitch for up to 4 samples per Instrument.
6. After setting these up Press the Save/Enter button to save your User program. It will now be a User Drum sound.

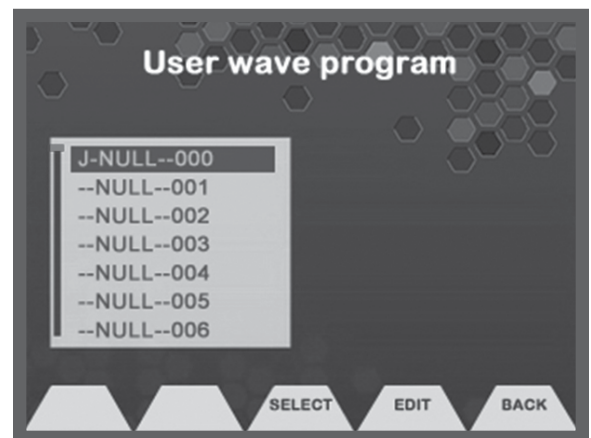

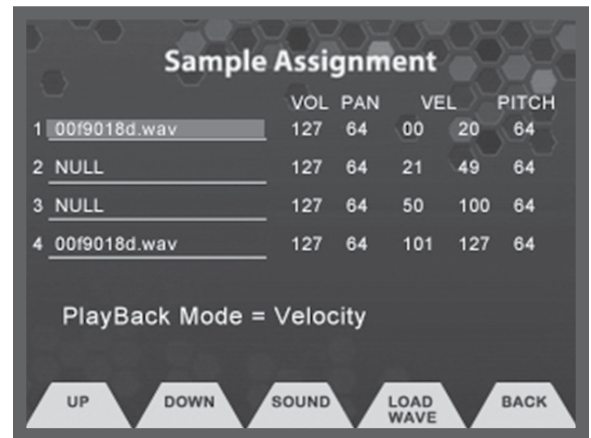

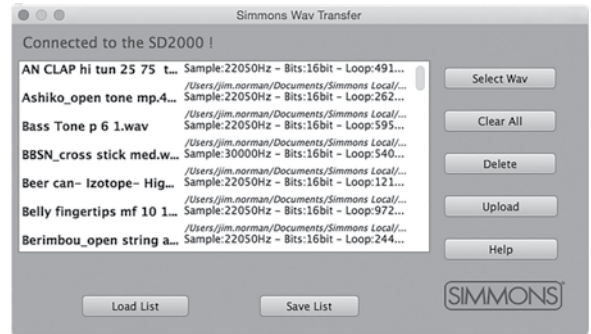

Playback Mode allows you select between Velocity switching, Sequence and Random between the samples that are assigned in the User Wave Instrument.

To see examples of file transfer and use, visit [simmonsdrums.net/videos](http://simmonsdrums.net/videos).

**Please Note:** If you delete your samples from the Utility Restore mode or Transfer more samples, the samples in the SD2000's memory will be overwritten.

## SAVING YOUR WAVE PROGRAM

1. From the main Kit page press the Save/Enter button.
2. You come to a screen where you can name your sound.
3. Use the Value dial to change the character and move to the next character with the cursor buttons.

4. After you complete changing the characters you then should press the Save/Enter button.
5. You will come back to the Kit screen. It will be the original kit.
6. You can go to the User kit by pressing the Function button Preset and highlighting the kit you want to overwrite and then press the Save/Enter button to select it.

## UTILITY MODE

The Utility mode contains the settings for the module operations that aren't in the Kit or Song modes.

The main screen settings are:

- Auto Power- on/off: Turns off module after 4 hours of no use.
- MIDI Local- on/off: Local on/off helps to fix MIDI loop issues. Set to off if you are using an external MIDI sequencer.
- MIDI Soft Thru- on/off: Turns MIDI out to thru to link several MIDI products.
- Add-Preset Memory Protect ON: This protects the preset Kits from Modification.

### TRIGGER

Normally the Trigger settings are optimized for the best playability for the SD2000. However since some players will want different sensitivities or may place the drums on the rack in a different manner than the factory setup you may find it helpful modify the settings for your own playability. To Enter the Trigger settings menu press the Function button under Trigger on the Main Utility screen.

*Note: When changing the trigger parameters on the various parts of the kit, the trigger responses with the kit will be slow. This is due to the module refreshing the information on the screen. We recommend setting the trigger parameters one drum or cymbal at a time and then verifying your settings by pressing the Function Back button to return to the main Utility screen.*

### TRIGGER SETTINGS (GLOBAL):

- Follow Trigger - On/Off: This allows you to select the drum or cymbal settings by striking it.
- Current Trigger - all inputs: This allows you to manually select the trigger input for editing.
- Sensitivity -1-32: This adjusts the sensitivity of the pad trigger to regulate the pad response. Higher settings result in higher sensitivity, so that the pad will produce a loud volume even when struck softly.
- Threshold - 0-50: This setting allows a trigger signal to be received only when the pad is struck harder than a specified force. This can be used to prevent a pad from sounding in response to extraneous vibrations from another pad.
- Curve: Easy, Fixed, Normal, Dynamic: These curves can be set per pad. Depending on your playing style you may want to use different curves for different drums and cymbals.

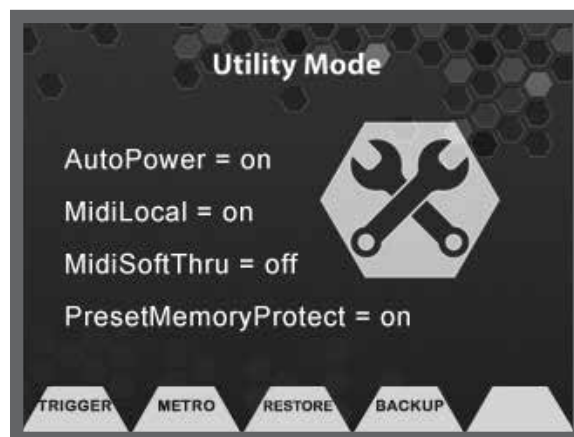

**Easy:** Good for players that want to reach high dynamic response without hitting too hard.

**Fixed:** The sound will be at a fixed volume each time, regardless of how hard a pad is hit.

**Normal:** The most linear playing curve.

**Dynamic:** Offers the highest dynamic range.

- Retrigger -1-8: The trigger response of the SD2000 has been designed to exactly match the signals produced by the SD2000 drum and cymbal pads. Triggering the SD2000 from other commercially available pads or triggers may result in 'double triggering' due to the long decay characteristics of some types of pickups. Setting the retrigger value to a lower number can in most cases eliminate unwanted double triggering, although this may prevent intentional rapid playing such as a drum roll or flam. If you experience an unwanted double trigger, try reducing the default value (6 for most drums). The value 1 will prevent rapid triggers of 500ms or so, where the value 8 will let all triggers through no matter how close together they are.

- Crosstalk - 0-75: When two pads are mounted on the same stand, the vibration produced by hitting one pad may trigger the sound from another pad unintentionally (This is called crosstalk.) You can avoid this problem by adjusting Crosstalk Cancel on the pad that is sounding inadvertently. If the value is set too high, then when two pads are played simultaneously, the one that is struck less forcefully will not sound. So be careful and set this parameter to the minimum value required to prevent such crosstalk. With a setting of 0 crosstalk prevention does not function.
- Splash Sensitivity - 1-8: This adjusts the hi hat pedal splash sensitivity.

## UTILITY MODE

### METRONOME SETTINGS

- Measure Sound: This determines the sound used for the Measure.
- Measure Sound Volume: This determines the volume for the measure sound.
- Beat Sound: This determines the sound for the beat sound.
- Beat Sound Volume: This determines the volume for the beat sound.
- Tempo: Sets the BPM for the Metronome from 20-240.
- Time Signature: Determines the Time signature- 1/4, 2/4, 3/4, 4/4, 5/4, 6/4, 7/4, 3/8, 6/8, 9/8, 12/8.
- Interval: Determines the metronome interval- 1/4, 1/8, 1/12, 1/16, 1/2, 3/8.

### BACKUP AND RESTORE

- Restore to Factory: This will reset the module back to factory setup
- Clear User Programs: Clears any User Instruments that have been created.
- Clear User Samples: This will delete any user samples that have been imported into the flash memory.

### BACKUP

- Backup of all the Internal User programs and Samples to USB device.
- Save Settings: Save factory setup.
- Load settings: Load factory setup.

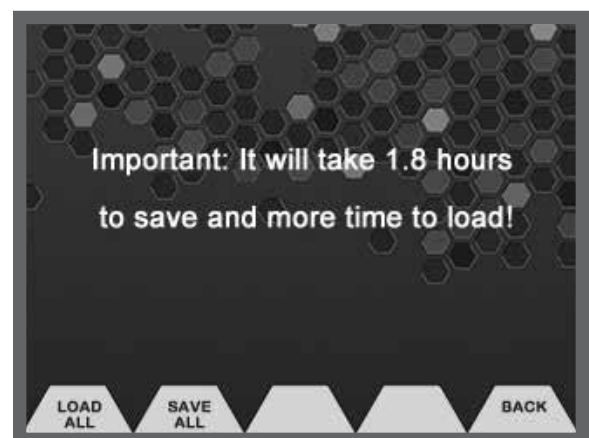

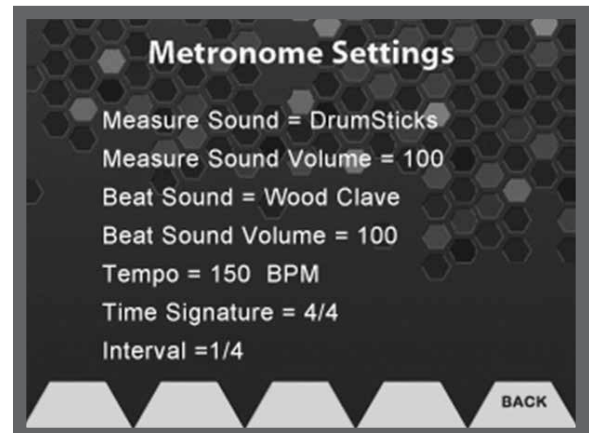

### TO SAVE ALL USER KITS AND VOICES (SOUNDS)

- Press [User Kit & Voice] button
- SAVE: Save all kit and voice sounds. Note that you can save as many sets of kits and sounds as you wish, depending on the storage size of your backup device.
- LOAD: Load all kit and voice sounds.

### TO SAVE EVERYTHING IN MEMORY OF THE SD2000 INCLUDING SAMPLES

- Press [ALL] button.
- SAVE ALL: Save all factory setup and all kit and voice and wave sample. Note that you can save as many memory dumps as you wish, depending on the storage size of your backup device.
- LOAD ALL: Load all factory setup and all kit and voice and wave sample. Note that all kits, sounds and samples will be overwritten.

It will take 1.8 hours to save and more time to load!

# APPENDIX

## KIT LIST

Kit Order	Name	Description	Midi Program Change Number
1	Modern Maple	Maple Kit with no mutes with P Cymbals	0
2	Grunge Rock	Birch toms with African Mahogany snare and P cymbals	1
3	Studio Funk	Bubinga toms with Metal 14x6.5 snare and P cymbals	2
4	Birch Studio	Birch toms with 13x7" snare and Z cymbals	3
5	Jazz	Vintage Maple toms and 14x5" Maple snare. Z Cymbals	4
6	Acrylic	70's Rock Acrylic Kit	5
7	Fusion	Maple Fusion Kit	6
8	60's Classic	60's Classic Maple kit with TeaTowels for Snare and Toms	7
9	SDS9	Simmons SDS9 Electronic Kit	8
10	Bubinga	Bubinga Wood shells and M Cymbals	9
11	Classic Rock	Vintage maple rock kit with metal 14x5.5" snare, Z cymbals	10
12	Far East	Collection of Asian instruments. Gamelon, Gongs, vocals, etc	11
13	Modern Metal	Oak toms with mutes, 14x6 Maple snare muted with M cymbals	12
14	Native American	Collection of Native American instruments- Drums, shakers, vocals	13
15	Nails	Eclectic collection of heavily processed acoustic drums	14
16	Jazz Brush	Vintage Maple toms and 14x5" Maple snare played with brushes. Z and rivet brush Cymbals	15
17	Classic Funk	Muted Bubinga toms and Piccolo snare with Z cymbals	16
18	Hip Hop	Collection of Hip Hop drums, vocals, effects and scratches	17
19	Drumline	Collection of Drumline instruments Concert bass drum, marching snare and glockenspiel	18

## APPENDIX

## KIT LIST

Kit Order	Name	Description	Midi Program Change Number
20	West Africa	Collection of African Instruments- Udu, Djembe, Cowbell, Talking Drum, etc	19
21	80's Metal	Big processed drums with layered Simmons drums on toms	20
22	India	Collection of Indian instruments- Tablas, Apa Kalai, Vocals, etc	21
23	BeatBox	Drum kit made up entirely of vocals	22
24	Brazil	Collection of Brazilian instruments	23
25	Tekno	Collection of Classic Techno electronic drums combined with Synth sounds	24
26	Funk Rock	Maple Toms with African Mahogany snare and S Cymbals	25
27	Power Chords	Rock kit with Guitar hit effects	26
28	Junkyard	Collection of found percussion such as Dumpsters, Trash cans, chain link fence and shopping cart	27
29	SDS7 Analog	Simmons SDS7 Kit with a focus on analog sounds	28
30	Modern Pop	Maple Toms with classic metal snare. S Cymbals	29
31	WaterDrums	Exotic combination of Water drums and waterphone effects	30
32	Reggae	Reggae style kit with muted toms and raspy metal snare. M cymbals	31
33	Stadium Rock	Steel toms with Metal snare and S cymbals. Lots of reverb	32
34	Middle East	Collection of MidEastern instruments- Bendir, Darbuka, Mashar, Riq and vocal.	33
35	Orchestral	Collection of Orchestral percussion instruments. Timpani, Glockenspiel, Gong, Triangle, Vibraslap, Windchimes	34
36	SDSV	Simmons SDSV. The most classic vintage Simmons Kit	35
37	Blues	Maple toms with wood snare and Z cymbals	36
38	East Africa	Collection of African instruments- Bata's, Aksiko, Vocals, etc	37

# APPENDIX

## KIT LIST

Kit Order	Name	Description	Midi Program Change Number
39	Nashville	Maple toms and wood snare with Z Cymbals for Country Music style	38
40	StreetBeat	Collection of found percussion instruments- Plastic Bucket, bottles, pipes, cans, etc	39
41	Gated Drums	Drums with gated reverb effect with P cymbals	40
42	Salsa	Latin inspired kit with collection of standard latin instruments- Conga, Tumba, bongos, timbales, etc	41
43	R'nB	Combination kit with electronic and acoustic drums along with phrases	42
44	Snares	Oak kick with combination of snares and other instruments on toms. Maple rutes snare	43
45	80's Pop	Birch toms with thick metal snare. Simmons SDSV toms on rims. P cymbals	44
46	Birch Latin	Birch toms with maple snare with Z cymbals. Latin instruments on tom rims	45
47	SDS7 Digital	Simmons SDS7 Kit with a focus on digital sounds	46
48	Maple Rutes	Maple kit with snare with snares off. Z cymbals	47
49	70's Rock	Maple toms with no bottom heads. Large metal snare. S cymbals	48
50	Bubinga Africa	Bubinga toms with African Mahogany snare with African percussion on tom rims. M Cymbals	49

*Note: Some kits will have sounds programmed on the rims of the drums.*

# WARRANTY

Two (2) Years limited warranty

Subject to the limitations set forth below, Simmons® hereby represents and warrants that the components of this product shall be free from defects in workmanship and materials, including implied warranties of merchantability or fitness for a particular purpose, subject to normal use and service, for two (2) years to the original owner from the date of purchase.

Retailer and manufacturer shall not be liable for damages based upon inconvenience, loss of use of product, loss of time, interrupted operation or commercial loss or any other incidental or consequential damages including but not limited to lost profits, downtime, goodwill, damage to or replacement of equipment and property, and any costs of recovering, reprogramming, or reproducing any program or data stored in equipment that is used with Simmons® products. This guarantee gives you specific legal rights. You may have other legal rights which vary from state to state. Some states do not allow limitations on how long an implied warranty lasts, so the above limitation may not apply to you.

# FCC STATEMENT

1. Caution: Changes or modifications to this unit not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.
2. Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
  - Reorient or relocate the receiving antenna.
  - Increase the separation between the equipment and receiver.
  - Connect the equipment into an outlet on a different circuit.
